

TWR181ES Control Board Replacement

NOTE: Empty contents of unit and disconnect from power source before attempting any repairs.

Tools Needed

- Butter Knife
- Phillips Screwdriver

STEP 1: Remove the control panel assembly

• With a butter knife or a thin plastic pry tool, remove the two decorative covers that cover the control panel screws by prying behind them

NOTE: Be careful not to scratch the panel

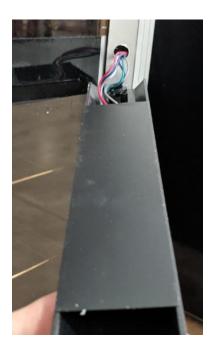

Remove the Philips screws from control panel

• Remove the control panel from the unit.

Step 2: Remove and replace the control board assembly

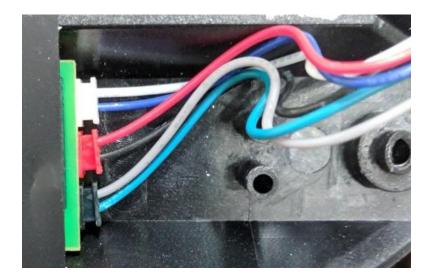

• Peel the black tape off of the back of the control panel to expose the circuit board

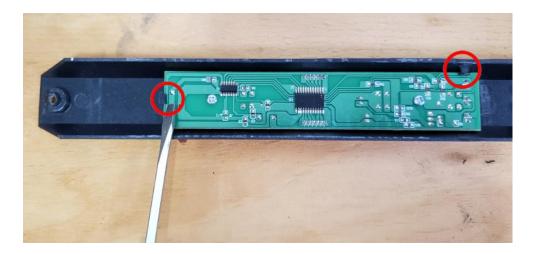

Remove the three electrical connectors from the circuit board

• Remove the Phillips screws securing the control board to the housing

• Slide the new board under the clips and reinstall the two Phillips screws

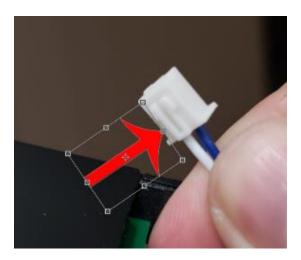

Step 3: Reinstall the control panel assembly

• Reconnect the three electrical connectors – The clip side of the connector goes on the panel side

• Reinstall the black plastic tape cover over the circuit board

• Reinstall the panel to the door by carefully feeding the wiring into the door

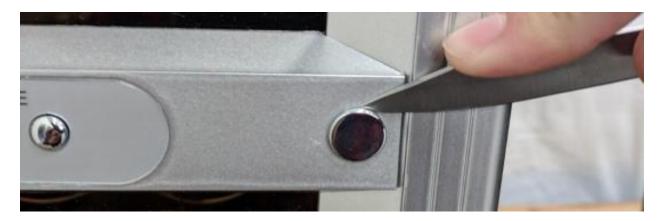

Reinstall the two Phillips screws securing the panel to the door

• Reinstall the two decorative plugs over the screws

Procedure Completed!
