

## VBR Series Control Circuit Board Replacement

### Tools Needed

- Phillips screwdriver

**NOTE:** Disconnect the unit from the power source before attempting any repairs.

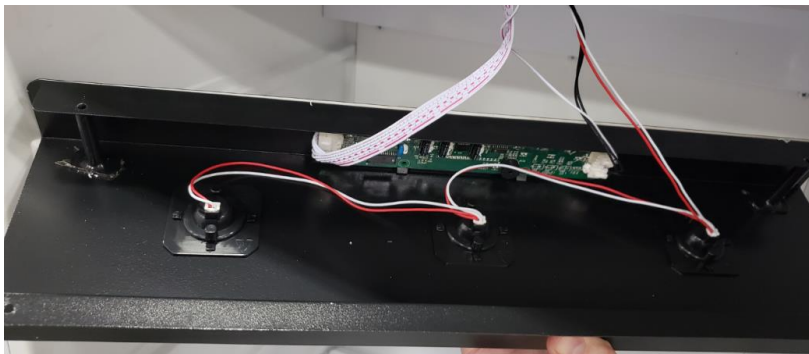

### Step 1: Remove the control panel assembly

- Remove the four Phillips screws securing the control panel assembly to the fridge

- Slowly pull the panel down on one side and twist it sideways

**NOTE:** There are electrical connectors for each light and the control circuit board. Do not pull too hard and damage those connectors.

## Step 2: Remove and replace the control circuit board

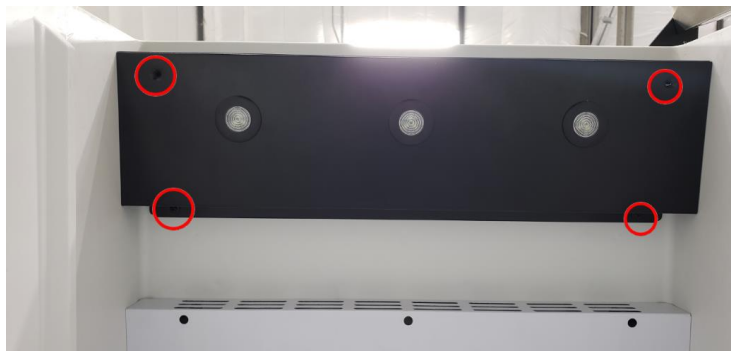

- Disconnect the electrical connectors on the circuit board

- Unclip the circuit board from the control panel housing
- Clip the new circuit board into place
- Reconnect the 3 electrical connections

## Step 3: Reinstall the control panel assembly

- Lift the control panel assembly into place
- Attach the four screws to secure the control panel to the fridge

**Procedure Completed!**
